EXAMPLE INTEGRATIONS

Java (Spring)

.NET (ASP.NET)

Node.js (Express)

PHP

PHP (Slim)

Python (Flask)

Ruby (Rails)

Get Started

We provide complementary client and server SDKs to complete your integration:

- The client SDKs enable you to collect payment method (e.g. credit card, PayPal) details
- The server SDKs manage all requests to the gateway

We have SDKs for the following client platforms and server languages:

Client SDKs	Server SDKs
• Android • iOS • JavaScript	• Java • .Net • Node.js • PHP • Python • Ruby

Before getting started with an integration, there are 2 key concepts that are helpful to understand: the client token and the payment method nonce.
